# COVID-19 ENVIRONMENTAL CLEANING AND DISINFECTING SPECIALISTS

PAS cleaning crews trained for biohazard response to coronavirus

## Biohazard Environments & High Risk

Airborne pathogens such as COVID-19, bodily fluids, droplet's, caused by COVID-19 pose a real risk to the environment as well as both human & animal health.

The liability of contaminated premises far exceeds the hazards most cleaning companies and their employees are willing to undertake, or have no understanding of the specialised requirement's in undertaking the processes in decontamination. You require specialised highly trained staff.

Principal Asset Services is a specialist asset, environmental cleaning and disinfecting management company based in Sydney, New South Wales. ISO international certified.

Principal Asset Services is committed to providing the emergency services, councils & commercial businesses with a fast, reliable & professional service covering the whole of Australia 24/7 365 days a year.

All Principal Asset Service technicians also carry with them a copy of SWMS, Safety Data Sheets for all products used by Principal Asset Services to ensure the best technic of cleaning a product and for the technician's health & safety. We also provide A/B Laboratory swab testing.

As highly trained professionals in this area, Principal Asset Services can also extend its services by offering its clients a free consultation, a method statement and a certificate of completion as standard once any of our services has been completed. As licensed waste carriers, we offer a service to remove and safely dispose of all waste. Any contaminated items such as furniture or personal per sessions are catalogued before removal.

## Cleaning & Dicontamination

Biohazards are the most dangerous potential risk of self-exposure, and require cleaning specialist trained in this field. The cleaning task **should not be attempted** by untrained individuals, or by your normal day to day cleaning staff or contractors. Covid-19 requires specialise biohazard environmental disaffecting cleaning specialists.

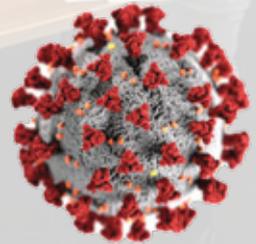

There are different processes to clean and decontaminate biohazards.

Don't use ordinary vacuums or HEPA vacuums you will spread the virus or biohazard further and risking the health of others; and or cleaning staff.

Failure to properly clean and decontaminate can lead to further exposure to health and safety.

The source must be properly removed from:

- Walls
- Doors
- Toilets
- Central Air conditioning
- Air vents
- Tables /Desks
- Kitchens & Equipment
- Computers & keyboards
- Etc...

**The virus can remain on surfaces for up to 17 days**

## Biohazard Environments

Blood borne pathogens, bodily fluids, Virus's & diseases and hypodermic needles pose a real risk to the environment as well as both human & animal health.

The liability of trauma & crime scene's far exceeds the hazards most cleaning companies and their employee's are willing to undertake. washing blood or any other contaminants down a drain and into the sewer system is illegal in the Australia for fear of contaminating the sewers & spreading disease.

Principal Asset Services are specialists in decontaminating, removing and restoring any potential biohazard scene back to it's original condition.
